

CCDC Inject

INJECT NAME	Design a DR Solution
INJECT ID	DSGN06T

INJECT DESCRIPTION:

Develop a specific plan for building/implementing a disaster recovery solution for the Ubuntu Web Server. If this server were to be complete made inoperable, how would the service be restored on another compatible server. Be specific and consider OS, recovering application specific files from backup, making the configuration changes needed in other facilities such that the public (i.e. scoring engine) can find the service and consider it up and functional. Outline exactly what those steps would be. Assume that a blank VM server will be available for your DR needs.

INJECT DELIVERABLE

Develop a clearly written business memo that enumerates the tasks and steps needed to implement a DR facility for this server. Be. Specific as possible. This tasks should be written within the context of the competition Pods an facilities, and not a generic DR plan.
