

CCDC Inject

INJECT NAME	Examine Address Translation Sessions on Firewall
INJECT ID	TOOL11T

INJECT DESCRIPTION:

Examine the address translation policy (rules) and current session table on the firewall and explain the translation structure (private addressing hosts/networks) relationship with public addressing. Be specific in what these values are. Determine whether this is a NAT or PAT relationship.

INJECT DELIVERABLE

Prepare a clearly written business memo that describes the address translation policy on the of the firewall. Identify the public and private addressing relationship and if this is a NAT or PAT relations. Describe the differences between NAT and PAT. Provide screen shot of the address translation policy and the current session table.
