Subject: Hot Site

In the even of a disaster to our servers we would need the following equipment:

Servers:

1 Server Running Linux for Splunk 9.1.1 and a FireFox application to run Splunk web application.

1 Server Running CentOS Operating System to host ecommerce.

1 Server Runng Linux to host Fedora21 Webmail.

1. Server Runnig Debian 10 to host the DNS.

1. Virtual Machine hosting Palto Alto Version 11.0.0 to host our firewall systems.

The firewall must be operational and capable of running DDOS mitigation.
