

CCDC Inject

INJECT NAME	Script to Manage Process Priorities
INJECT ID	LINX11T

INJECT DESCRIPTION:

For the Linux servers, write a script that will allow an administrator to manage the priorities of running processes. The script should present the user with two options:

- 1.) View Current Processes and their Priorities
- 2.) Change the Priority of a Process

INJECT DELIVERABLE

Prepare a clearly written business memo that presents the script. Include the steps needed to make the script useable as a command line tool. Use screen shots that show the script working, for each of the 2 functions.
