

CCDC Inject

INJECT NAME	Verify the use of NetBEUI
INJECT ID	WINS01T

INJECT DESCRIPTION:

There are a number of older vulnerabilities associated with the networking protocol NetBEUI. Check the appropriate server for the implementation of the protocol. If it is present, then determine if it is needed. There are a number of places to check if it is installed, and if any process is running it. Verify all those places.

INJECT DELIVERABLE

Respond with a business memo that describes how you determined the use of NetBEUI and on which servers. Verify with screen shots all the places and status points that you checked. If it is present, explain if it is needed and for what, and if not needed, how did you disable it.

Include screen shots to validate your findings, and actions.
