

CCDC Inject

INJECT NAME	Memo to Explain FW Features to Customer
INJECT ID	BCOM06A

INJECT DESCRIPTION:

A potential new customer is concerned about the organizations's perimeter security. Since they are entrusting a number of Trade Secrets with the organization, they are concerned about breaches and in particular the mitigations that we have in place to thwart attempts to exploit online applications, such as the web site, email system etc...

We need to write a memo outlining the features of the firewall, and in particular the features that we have enabled to thwart the exploitation of applications by ensuring that the communications between the client and server are legitimate exchanges.

INJECT DELIVERABLE

Prepare a customer facing memo that addresses their concern with the ability of our firewall to thwart illegitimate communications with the web applications among others. Include screen shots that show that these facilities are enabled in the firewall security policy.
