

CCDC Inject

INJECT NAME	Incident Response Procedure for Web Site Defacement
INJECT ID	DSGN14A
MAX SCORE	100

INJECT DESCRIPTION:

Create a written procedure that can be used to recover from attacks that have caused web site defacement. For the web sites in the topology the procedure should provide for an efficient way to recover their functionality in the event that an attacker has modified the html and configuration files for the site.

If there are facilities that need to be created in the topology in order to implement the procedure, include those tasks and actually complete those tasks, so that the procedure is functional, should it be needed in the future.

INJECT DELIVERABLE:

Prepare a clearly written Incident Response Procedure for Web Site Defacement. If steps were taken to complete prerequisite tasks, use screen shots to document their completion.
