CCDC Inject Scoring Rubric

INJECT NAME	Configure Network Defensive Features
INJECT ID	SVRA01T
MAX SCORE	100

INJECT DESCRIPTION:
Setup **all** servers (both Linux & Windows) according to the following guidelines:

1.) Control both ingress and egress traffic.

2.) Secure administrative and inband management to each server.

3.) Structure the rules in a granular fashion to the level of protocol (TCP, UDP, ICMP) and requisite port numbers.

INJECT DELIVERABLE:
Develop a clearly written business memo that addresses each of the 3 guideline points. Structure the document so that each guideline is a section header, followed by a description of what was done (configured) to meet the goals of the guidelines. Include your understanding of what the guidelines is asking for. In each section include a screen capture to document what was configured on an example Linux and Windows server that meets the needs of the guideline. Provide assurance the all servers have been configured in accordance with this guideline.
